

Seismic Petition

Amber Wilson to: cr_board_clerk Clerk Recorder

10/25/2012 01:45 PM

Annette/Catrina,

We have been receiving petitions regarding the Seismic testing for a couple weeks - I've combined all the emails received up to date and will send you any additional petitions up to the meeting date.

Seismic Petition 25 Oct Combined.pdf

Amber Wilson
Secretary/Board of Supervisors
San Luis Obispo County
805.781.4335
abwilson@co.slo.ca.us

Item # 22 Meeting Date: 10/30/2012
Presented by: Amber Wilson - BOS
secretary
Received prior to meeting and posted to web
on: October, 2012

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/11/2012 01:24 PM

Gloria Eddie gave the following reason for signing this petition:

"Animal Welfare"

15966 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Note: this email was sent as part of a petition started on Change.org, viewable at <http://www.change.org/petitions/halt-the-central-coastal-california-seismic-imaging-project>. To respond, [click here](#)

From: [Mary Dorman](#)
Reply To: no-reply@change.org
To: boardofsups@co.slo.ca.us
Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/15/2012 04:01 PM

Mary Dorman gave the following reason for signing this petition:

"We already know where the fault lines are. We already know that these types of tests impact marine life. They will not really further our understanding of anything! It is just a fancy way to extort more money from us to put more money into already deep pockets! DUH!!! Should a quake be triggered by such testing it could be a disaster. Try solar or go to Nicola Tesla's FREE energy sources from the earth which the government already squelched when they murdered him years ago! Go to the different plans that people like Claus Ludwig and other rocket scientists proposed years ago that were shelved by car companies and others due to GREED. The answers lay there!"

17776 other people have also signed the following message:

The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter

then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/18/2012 11:31 AM

Anna Lee gave the following reason for signing this petition:

"This is an outrageously imbalanced proposition. It will do little good information wise, and has such potential harm to marine wildlife that it is unthinkable! Is there no end to such myopic thinking?"

18261 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter

then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Note: this email was sent as part of a petition started on Change.org, viewable at <http://www.change.org/petitions/halt-the-central-coastal-california-seismic-imaging-project>. To respond, [click here](#)

Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/12/2012 02:24 PM

Julie Thompson gave the following reason for signing this petition:

"I care about our ocean and the wildlife that lives in it! "

16846 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Elizabeth Robertson gave the following reason for signing this petition:

"Mass murder of marine life is just too sad. "

18335 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. ida mackay gave the following reason for signing this petition:

"It is very important that we realise that the dangers of nuclear power are obvious now. There is truly no denying it. Why bother using violent action to test the safety of an area when the testing methods themselves are obviously destructive to the creatures that reside in the region? Let us just gracefully, although perhaps reluctantly, move into a new era of intelligent actions rather than continuing to deny what we know. There has already been so much destruction to the oceanic creature community from all sorts of human endeavors. Cease these inconsiderate practices now. Practice Awareness and Love. Science now clearly knows that all of life is connected. Support Life!"

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/20/2012 02:13 PM

Julie Thurston gave the following reason for signing this petition:

"Continuity of marine life is essential to the earth's health."

18356 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Note: this email was sent as part of a petition started on Change.org, viewable at <http://www.change.org/petitions/halt-the-central-coastal-california-seismic-imaging-project>. To respond, [click here](#)

Lori Perry gave the following reason for signing this petition:

"The whole of the Cental coast will suffer a long term affect. There is NO proof ANY of the marine life and the ECO system won't be greatly affected! Logically and common sense says the Cental Coast will be devastated. Very barbaric approach to testing when there are other ways PG&E can run tests. "

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/12/2012 06:00 PM

Paul Fordyce gave the following reason for signing this petition:

"I live on the central coast and this is just wrong."

16938 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Nikki DOyle gave the following reason for signing this petition:

"Protect marine life"

18427 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. Rhonda Lee gave the following reason for signing this petition:

"This is important to me for so many reasons. My father was a fisherman; I fish, AND my son fishes off our coast. Also, I believe dolphins intelligence exceeds ours on many levels. This seems like a cover-up to explore more offshore drilling opportunities at the expense of the health of many and for no good reason but personal interest and capital gain. I am sick of this behavior in our country!"

17807 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey vessel, its associated survey equipment, and support/monitoring vessels . . . The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). . . . 18 active air guns . . . would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Lynn Carmichael gave the following reason for signing this petition:

"I am very concerned about our marine life and the ocean waters in general."

16124 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.
