Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/16/2012 11:10 PM

linda collishaw gave the following reason for signing this petition:

"Our environment is too precious to be testing and putting sea creatures at risk!"

18099 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey vessel, its associated survey equipment, and support/monitoring vessels . . . The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). . . . 18 active air guns . . . would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. "The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Subject: Halt the Central Coastal California Seismic Imaging Project
Date: 10/12/2012 01:55 AM

Pat Christiansen gave the following reason for signing this petition:

"Protecting the sea life from the shattering noise/high frequency blast sounds that could devastate their sonar, hearing, etc."

16535 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Note: this email was sent as part of a petition started on Change.org, viewable at <http://www.change.org/petitions/halt-the-central-coastal-california-seismic-imaging-project>. To respond, [click here](#)

Merna Chance gave the following reason for signing this petition:

"This is not responsible stewardship for California or the earth. We can innovate other energy resources other than nuclear and oil."

16655 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Note: this email was sent as part of a petition started on Change.org, viewable at <http://www.change.org/petitions/halt-the-central-coastal-california-seismic-imaging-project>. To respond, [click here](#)

Patricia Kirby gave the following reason for signing this petition:

"Why is this important to me? First of foremost BECAUSE the well-being of ALL beings are important to me, AS WELL AS it's important to ALL of THEM...just as our OWN well-being is important to ourselves! (SHOULD GO WITHOUT SAYING!) Next - the well-being of our single largest ecosystem is important to ALL on this planet, and likely other planets (thinking outside the box). This project will obviously do no good for any of the above mentioned beings! Think of it in terms of living in a steel box (which has nearly, if not, 100% reflectivity, zero sound absorption) and someone comes along with a bullhorn and blasts ear deafening (to us humans, which means near death to most, if not all other species - as they have far more sensitive hearing) booms into this box - like putting M-80 FIRECRACKERS in your ears!! Think of the suffering we'd endure, until it finally killed us! DO UNTO OTHERS AS YOU WOULD HAVE DONE TO YOU!
RID nuclear - it's just a money maker for the RICH and a death sentence waiting to happen for us ALL!"

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Tyler Cox gave the following reason for signing this petition:

"marine life is important to me and this doesn't seem right."

16683 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Rose Hall gave the following reason for signing this petition:

"I live a few miles North up the coast from Diablo Canyon. You don't need seismic testing done to know that Diablo is a major threat to our safety and health. I think this testing is mainly being done so that PGE can sell the findings to the highest oil development company bidders at our expense. This testing has nothing to do with making Diablo safer if an earthquake occurs. "

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Sincerely,

Jill Quinn gave the following reason for signing this petition:

"This testing would be one of the most outrageous environmental onslaughts to prey on our coastal waters and the fragile ecosystems that lie within. It is clearly an attempt to throw big money at a bad idea so PGE to gloss over the fact that an old nuclear power plant built near the intersection of 3 fault lines needs anything other than to be shut down. "

17773 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Anne Leone gave the following reason for signing this petition:

"Our planet's natural systems are delicate, interdependent and unbelievably complex – developed over millennia – and that when we mess with them, we are tinkering in things we do not fully understand. Moreover, and most importantly, our lack of understanding makes it hard to accurately predict the full ramifications of our actions. These animals... not only are their individual lives important (and we would be torturing and killing them for almost no reason) but they are part of systems that are complicated, delicate, and which we must respect."
