**Subject:** Halt the Central Coastal California Seismic Imaging Project  
**Date:** 10/13/2012 09:15 AM

---

Kathleen West gave the following reason for signing this petition:

"this activity is particularly hazardous to our ocean wildlife, not only of dubious value geologically."

17131 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

**Subject:** Halt the Central Coastal California Seismic Imaging Project  
**Date:** 10/13/2012 11:55 AM

---

Dawna Fondell gave the following reason for signing this petition:

"I live here and have the great fortune of watching these beautiful creatures daily. The devastating results of this study is NOT worth the cost, financially or for the loss of sea creatures and birds throughout our central coast, which has the most beautiful coastline in California. This wonderful article says it very clearly. It will NOT change anything in the event of an earthquake."

17191 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Cindy Verloop gave the following reason for signing this petition:

"I'm sick and tired of the gas & oil industry destroying my planet for their obscene profit! Meanwhile they do everything they can to stop us from moving forward towards safer and greener energy. And as a resident of California, I know we cannot afford to "test" our fault lines for any reason. The potential for disaster at our nuclear facilities, damage to property and life are too high. STOP THIS INSANITY!"

16143 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. Kelli Mc gave the following reason for signing this petition:

"It is Important to me because harming the Ocean living animals and fish as well as the Birds and everything else this will damage by doing these so called tests will have a HIGHLY DAMAGING TO ALL OF THESE CREATURES AND TO ALL OF US PEOPLE AND TO OUR FISHERMAN AND TO THE FUTURE OF OUR PLANET!!! WHAT IS WRONG WITH YOU PEOPLE???? YOU HAVE TO KNOW THE DAMAGING EFFECTS OF THIS TO ALL THE THINGS I HAVE MENTIONED HERE AND EVEN MORE!!! THIS COULD EVEN HAVE MORE DAMAGING EFFECTS THAN WHAT I HAVE MENTIONED HERE AND YOU ALL HAVE TO KNOW THIS!!!! AND THESE SO CALLED TESTS DO NOTHING TO HELP US WITH INFO AS YOU WOULD LIKE US TO THINK!!! ONLY THAT IT (WILL) HELP YOU KNOW WHERE TO DRILL FOR OIL!!!! STOP THE LIES AND TRYING TO FOOL THE AMERICANS PUBLIC AND START ACTUALLY CARING ABOUT OUR PLANET AND STOP TRYING TO DESTROY IT WHAT YOU PEOPLE ARE TRYING TO DO WILL BE THE START TO THE END OF THIS PLANET AND US!!! THE OCEAN AND THE CREATURES IN IT BALANCE OUR ECHO SYSTEM STOP TRYING TO DO HORRIBLE THINGS THAT WILL MAKE US ALL END UP EXTINCT!!!!!"

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey vessel, its associated survey equipment, and support/monitoring vessels . . . The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). . . 18 active air guns . . . would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Linde Owen gave the following reason for signing this petition:

"The kill list is too large for any kind of study to merit respect.

The Diablo facility is aging and overproducing a nuclear waste stream that has no safe solution.

The seismic concern will not diminish with these studies.

Ratepayer costs of likely \$100 Million would better be applied to installing wind and solar collection at the site, transitioning to safer energy production from the grid supply source there.

The plant should be shut down on schedule, It was constructed in a questionable seismic location but more importantly, it is outliving it's safe lifespan. Storing the nuclear waste is equally questionable as to safety.

Thankyou, Linde Owen "

**Subject:** Halt the Central Coastal California Seismic Imaging Project  
**Date:** 10/15/2012 07:44 AM

---

Marjorie Hurd gave the following reason for signing this petition:

"We know the faults are there...why do we need to map them?"

17673 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

**Date:** 10/15/2012 10:42 AM

---

Alexander Wolf gave the following reason for signing this petition:

"Love for the Ocean"

17708 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

**Date:** 10/11/2012 04:35 PM

---

Randal Husk gave the following reason for signing this petition:

"The health of our earth and our seas are critical to all of us. this "testing" would cause incredible permanent damage and benefit no one -- except perhaps PG&E's pockets. "

16168 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter

then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Alexandra Steinicke gave the following reason for signing this petition:

"Because Killing Our Wildlife is not the solution! Would you spare a child to save Diablo Power plant? "

16203 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this
