Cathy Reitz gave the following reason for signing this petition:

"Protect Sealife and the fishing industry"

16205 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Janis Alana gave the following reason for signing this petition:

"waste of taxpayers money most likely; dishonors life and health of valuable animals."

17936 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Josephine Blea gave the following reason for signing this petition:

"It makes me sick to know life is being destroyed in the name of imaginary progress and data. "

17959 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter

then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

CARYN KELLER gave the following reason for signing this petition:

"For the future of our wildlife and striving for "clean" energy."

17977 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

Dawn Mandle gave the following reason for signing this petition:

"There is no reason to run these tests. There are infinite reasons not to. As running the tests will NOT prevent earthquakes or their damage and WILL create environmental deaths and destruction I see absolutely no reason to conduct these tests, and believe fully - as I always have - that Diablo Nuclear Power Plant should be shut down. Permanently. Here in California we have MANY other options for energy. Wind power abounds. Hope we can stop this ridiculous testing. If not, maybe it's time for Gort to show up after all ("The Day the Earth Stood Still")."

The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a

day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

-----

Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Arthur Boxman gave the following reason for signing this petition:

"Ludicrous to potentially hurt sea life for an aging nuclear power plant built on a fault line. Shut down the plant. PG&E will be fine - and so will customers drawing power from Diablo."

17796 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... Steve Bashspray gave the following reason for signing this petition:

"High cost, massively destructive seismic testing for WHAT??? PG&E already knows they built the plant on a fault-line against better judgment. Have we learned nothing from Fukushima?

Channel the proposed funding for this project into accountable development of decentralized, bio-regional, renewable energy projects!

Is this "seismic safety testing" an embarrassingly weak deception for more hazardous deep water petroleum surveying and drilling at the cost of the public trust and against the greater good of the whole? Are centralized, non renewable energy sources such as nuclear and fossil fuels continuing to be justified over decentralized, renewable energy because the wealth of the world to go from the concentrated few to the greater whole? Why else would we be so willfully directed toward, and kept dependent on, energy means that are not renewable and leading to increasing death and destruction as the remaining supplies become harder to access? Even these petroleum surveying techniques are destructive.

How will our emerging peaceful butterfly consciousness move from the old caterpillar ways and begin to implement renewable, peaceful energy options? Certainly we cannot count on the caterpillar-minded in hierarchical structure to do anything other than violently and blind-sightedly consume until sufficiently bloated to enough pain to trigger the transformation WE must complete. We are the ones we have been waiting for.

Jennifer Falsetta gave the following reason for signing this petition:

"This is important to me because it needs to end. People and their actions which cause damaging consequences should have never even had a start."

18051 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

alecia morgan gave the following reason for signing this petition:

"I live in the Central Coast area - Monterey Bay is a protected National Preserve - how can an organization be allowed to do such a destructive test - why is there such opposition to using solar and wind driven energy sources?? USGS already knows the location of the faults in the area - including the ones close (very close) to the Diablo Canyon plant. Risking the well being of life seems to be too large of a potential sacrifice for the sake of the mighty dollar."

**Subject:** Halt the Central Coastal California Seismic Imaging Project  
**Date:** 10/11/2012 10:03 PM

---

Clifton Potts gave the following reason for signing this petition:

"Don't want a Fukushima here!"

16433 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Lydia Blanchard gave the following reason for signing this petition:

"It reminds me that the number of excess deaths (according to the CDC) in eight CA cities, including Santa Cruz, as well as in four western states, is in the tens of thousands since 3/11/11, the date on which the three Fukushima meltdowns began. We in the northern hemisphere are in great danger of plutonium fallout, we don't know it, and our government is colluding with the Japanese government in not letting people know this. Infants are in greater danger than others. [www.radiation.org](http://www.radiation.org) and Cecile Pineda's remarkable book, Devil's Tango."

Henry Le gave the following reason for signing this petition:

"Protect the environment!"

18068 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this outrageous project. PG&E will pass on the costs to us, the consumers. We and all life

in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

**Subject:** Halt the Central Coastal California Seismic Imaging Project  
**Date:** 10/16/2012 10:03 PM

---

Jasmine Bauman gave the following reason for signing this petition:

"Because I do not want any animals life to be any less exhilarating with a hearing disability."

18087 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this

outrageous project. PG&E will pass on the costs to us, the consumers. We and all life in the ocean and the land around us stand to lose. And for what?

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

J Valencia gave the following reason for signing this petition:

"As a university student, I have taken many physical science courses in which I've learned about California and its earthquakes. Although the project could generate interesting data regarding the nature of earthquakes, the proposed seismic testing could negatively affect the marine biome and the animals living within it. To me, this project seems unnecessary and it is not something we should advocate. "

The project will not prevent the next earthquake. And if it happens and Diablo crashes, so do we. Think of the economic impact of such a disaster. A recent issue of The Economist has on its front cover a statement that says the dream of nuclear power has become a nightmare. It is time to put our resources into safe energy and abandon nuclear power.

Marla Collins gave the following reason for signing this petition:

"This is harming other beings, possibly including ourselves, and serves no purpose other than to quell curiosity and waste taxpayer money. "

16488 other people have also signed the following message:

Greetings,

I just signed the following petition addressed to: NOAA Fisheries, California Coastal Commission, California Department of Fish and Game, National Science Foundation, Lamont-Doherty Earth Observatory and U.S. Fish and Wildlife Service

-----  
Halt the Central Coastal California Seismic Imaging Project

The goal of the seismic imaging project is to attempt to measure the three major earthquake fault lines which run along our coast. The existence of these fault lines, especially after the continuing disaster at Fukushima, Japan, call into question the advisability of maintaining the Diablo Canyon nuclear power facility, operating near Avila.

The proposed testing will do nothing to prevent an earthquake on any of these fault lines. The tests will instead produce a large amount of data about dangers that we cannot avoid when these earthquakes occur.

Here is how the environmental impact report for the project describes it:

"The offshore component of the Project would consist of operating a geophysical survey 29 vessel, its associated survey equipment, and support/monitoring vessels . ... The survey would be conducted along the central coast from approximately Cambria to Guadalupe (including marine protected areas around Cambria and elsewhere). ... 18 active air guns ... would discharge once every 15 to 20 seconds."

In other words, huge underwater canons would blast ear-shattering sounds under the water in an area from Guadalupe to Marin County. (These same measures are used to search for offshore oil reserves — coincidence?)

The environmental impact report indicates these tests would kill or injure marine mammals, including seals, dolphins, whales and otters. They could make them go deaf which would mean a lingering death. Already depleted fishing resources would be impacted. Seabirds would be affected as well, with little or no way of mitigating the impacts. Migratory birds would be affected as the tests would go on 24 hours a day and lights at night would be required. Air quality would be impacted and the project would contribute to climate change.

The ocean is our most precious resource. If the life of the ocean does not matter then neither do our lives. Some few persons stand to make lots of money from this
